BOTWARREN

A live pixel-art space station where your Claude Code and Codex agents and your builds are the crew: real activity, shown about 90 seconds late, with no prompt, code or file name ever leaving your computer.

WHAT IT IS

Botwarren turns the shape of AI coding work into a living miniature station. Each agent session is a crew member, each build is a machine that runs, passes or fails, and a build is never shown as a deployment unless it is one. A ship is one developer's or team's own station at their-name.botwarren.com; anyone can watch it, walk a little visitor around it or stream it into OBS.

HOW IT WORKS

- **Install.** One command on Windows, macOS or Linux, about three minutes, no administrator rights.
- **Watch.** Your Claude Code and Codex sessions appear as a crew; wrapped builds appear as machines.
- **Share.** Your own address, link-only until you list it, with OBS overlays for streamers.

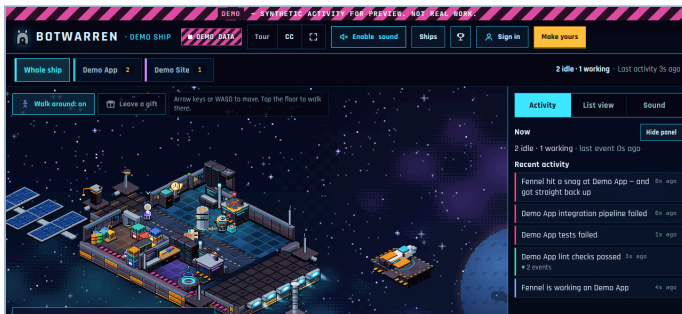

THE PRIVACY STORY

- **Nothing textual leaves.** Only fixed status codes and numbers: working or idle, the kind of step, a build result. There is no free-text field to leak a prompt, a path or code.
- **Held back about 90 seconds.** An extra safeguard on top of removing details first, not instead of it.
- **Yours to stop and read.** One command pauses it, the agent is open source (Apache-2.0) and talks only to your ship's own address.

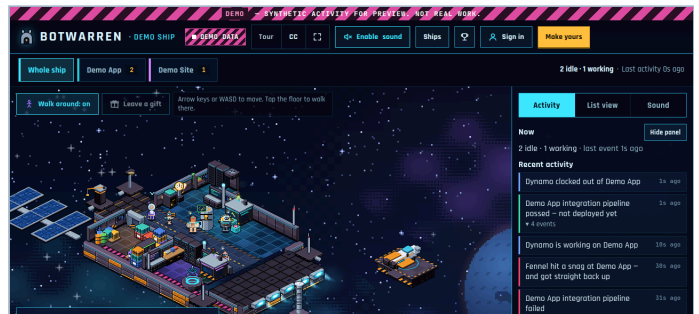

TRY IT

A 20-second interactive demo, no sign-in and nothing to install: botwarren.com/try. Everything in it is labelled DEMO and made up.

SCREENS (DEMO SHIP, SYNTHETIC ACTIVITY, LABELLED DEMO)

A build fails on the demo ship; the crew react.

The agent fixes it and the pipeline passes (not deployed).

FACTS

Made by	TurboKast Ltd
Price	Free to create a ship today, with a launch cap on open sign-ups
Works with	Claude Code and Codex (verified with real session files); Herdr and Ninox (fixture-tested); OBS browser sources
Platforms	Windows, macOS, Linux (Node.js 22.13 or newer)
Source	The ship agent is open source, Apache-2.0: github.com/turbokast/botwarren-ship
Links	botwarren.com · botwarren.com/launch · botwarren.com/trust.html · botwarren.com/privacy.html
Contact	support@turbokast.com

Botwarren is an independent product of TurboKast Ltd. It is not made, endorsed or sponsored by Anthropic or OpenAI; Claude Code and Codex are their products. Screens in this kit show the labelled demo ship; the live fleet is at botwarren.com/ships.
